

# SEAFOOD AND FISH PROCESSING AUTOMATION

Oceatec offers automation solutions and innovative ideas to the seafood and fish processing industry. Oceatec specializes in developing new equipment and in improving the performance of existing machinery, solving specific problems that processors and fishermen experience.

For instance, Oceatec will efficiently meet all types of requests about:

- processing automation for under-developed species,
- enhanced processing of by-products and residues,
- improved productivity and overall performance of existing equipment.

With strong engineering expertise, Oceatec acts as a problem-solver, targeting the development of innovative and effective solutions. The end objective is to increase your fish and seafood processing to yield greater productivity and business value.

## Urchin Processing

As an example, Oceatec has developed an urchin processing equipment that makes processing operations more efficient with greater amount of roe vs. raw product. This system solves labour expertise problems related to urchin roe production, and it also adequately answers the needs and requirements expressed by urchin processors.
